This Friday the UH AMS graduate student chapter is organizing an event "Writing and Submitting papers". Because writing (and submitting) research papers is vital, this event would be very helpful for all the graduate students in the department, both in pure and applied mathematics.

This event consists of a panel of five professors: Dr. Mark Tomforde, Dr. William Ott, Dr. Gordon Heier, Dr. Yuliya Gorb, and Dr. Jingmei Qui. The talk will begin with Dr. Tomforde addressing the audience for first 10 minutes and then we will have the panel answer questions from the audience.

This talk aims at delineating the important aspects of the effective creation and communication of mathematical writing. How to be creative in generating curiosity and motivation among readers, way to provide proper context to your thesis, the essential skills required to master the celebrated ways of writing mathematics, and how to write an effective letter of submission, are some of the issues this talk will be centered on.

Food and drinks will be served at the event!
