

Lectures on Lyapunov Exponents and Smooth Ergodic Theory

L. Barreira and Ya. Pesin

Contents

Introduction

1. Lyapunov Exponents for Differential Equations
 2. Abstract Theory of Lyapunov Exponents
 3. Regularity of Lyapunov Exponents Associated with Differential Equations
 4. Lyapunov Stability Theory
 5. The Oseledets Decomposition
 6. Dynamical Systems with Nonzero Lyapunov Exponents. Multiplicative Ergodic Theorem
 7. Nonuniform Hyperbolicity. Regular Sets
 8. Examples of Nonuniformly Hyperbolic Systems
 9. Existence of Local Stable Manifolds
 10. Basic Properties of Local Stable and Unstable Manifolds
 11. Absolute Continuity. Holonomy Map
 12. Absolute Continuity and Smooth Invariant Measures
 13. Ergodicity of Nonuniformly Hyperbolic Systems Preserving Smooth Measures
 14. Local Ergodicity
 15. The Entropy Formula
 16. Ergodic Properties of Geodesic Flows on Compact Surfaces of Nonpositive Curvature
- Appendix A. Hölder Continuity of Invariant Distributions, by M. Brin
- Appendix B. An Example of a Smooth Hyperbolic Measure with Countably Many Ergodic Components, by D. Dolgopyat, H. Hu and Ya. Pesin

2000 *Mathematics Subject Classification*. Primary: 37D25, 37C40.

Key words and phrases. Lyapunov exponents, nonuniformly hyperbolic dynamical systems, smooth ergodic theory.

L. Barreira was partially supported by FCT's Funding Program and the NATO grant CRG 970161. Ya. Pesin was partially supported by the National Science Foundation grant #DMS-9704564 and the NATO grant CRG 970161.
