Hi, everybody,

I'm Virginia Hollyer and you may call me Ms. Leigh. Math 3303, as you know, is an online course. It has asynchronous video lectures. BUT it is not self-paced. You have poppers deadlines and homework deadlines, and Discussion Board deadlines.

There is no textbook for the course. You will use the Notes on my website and watch the videos on my website. My website is:

www.math.uh.edu/~dog

The course policies, grading scheme, calendar and all kinds of stuff are posted on my website.

Now you'll need a COURSEWARE account for the course. We don't use Blackboard in Math. So if you already have an account, great. If not use the link on my website to make an account. If you've already had your picture taken and your fingerprints are on file with CASA, good. Else you'll need to go to CASA at the beginning of the semester and get this done. You will take your tests at the CASA Testing Center by appointment.

Your first graded assignment is Popper Zero. The popper is on my website at the top of the list for course Modules. I'll be sending a series of initial emails with information and facts about the course. The Popper Zero questions are about course administration facts. It is due on Friday, September 1 late in the evening.

Poppers are answered in Courseware under the EMCF tab. EMCF is electronic multiple choice form. So once school starts and you've got your Courseware account, start getting organized on answering those questions.

Again, welcome. The material will be new to you. And the course format might be new, too. Much of it will be fun, though!

Email me if you have questions! More to come,

Ms. Leigh
