

## **Info...**

We will finish polar coordinates and start  
parametric equations.

## More Area Examples

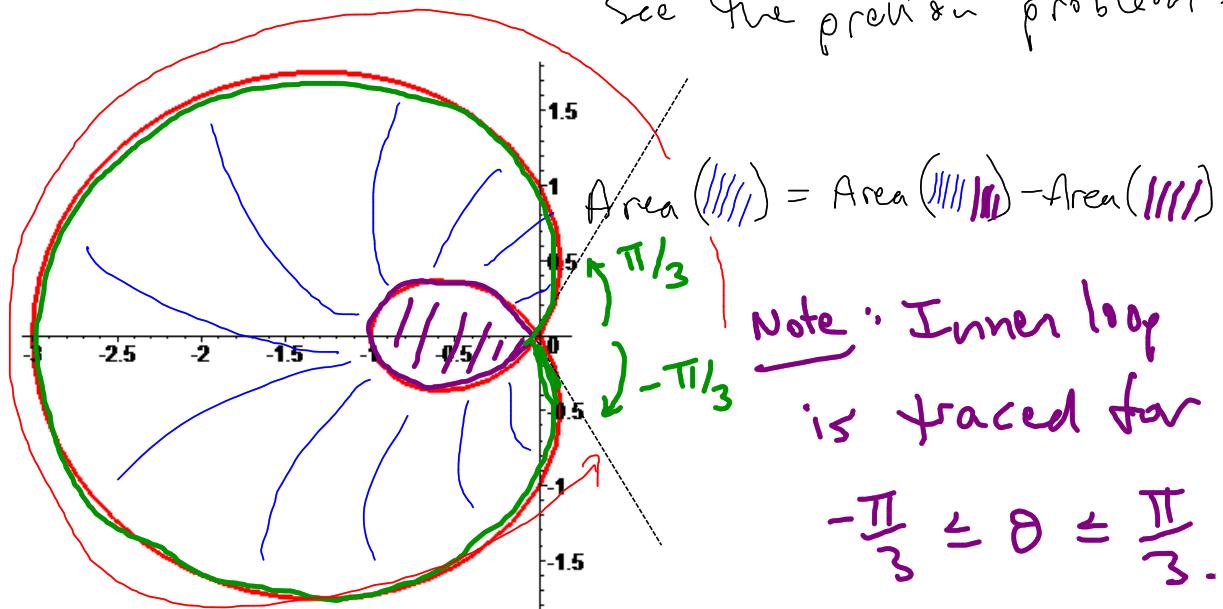

Example: Give the area of the region that is in Q4 and inside the outer loop of the polar graph  $r = 1 - 2 \cos(\theta)$ .

= 0.69

**Example:** Give the area of the region that is inside the outer loop and outside the inner loop of the polar graph  $r = 1 - 2 \cos(\theta)$ .

See the previous problem.

The outer loop is traced for  $\frac{\pi}{3} \leq \theta \leq \frac{5\pi}{3}$ .

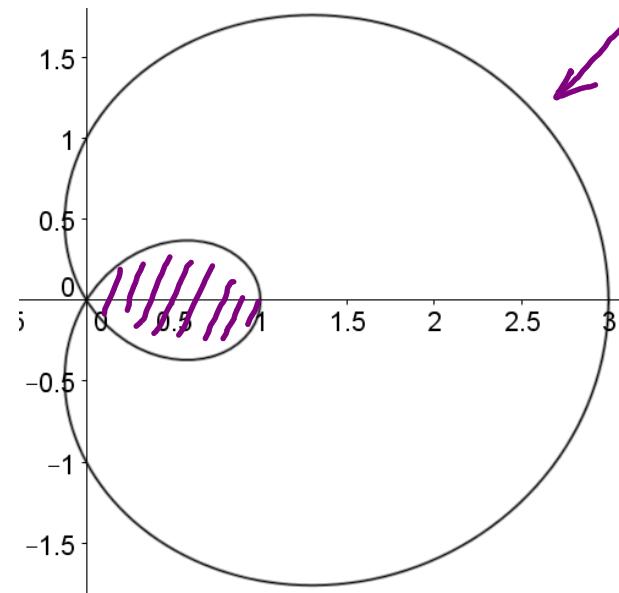

$$\begin{aligned} \text{Area}(\text{blue}) &= \text{Area}(\text{outer loop}) - \text{Area}(\text{inner loop}) \\ &= \frac{1}{2} \int_{\pi/3}^{5\pi/3} (1 - 2 \cos(\theta))^2 d\theta - \frac{1}{2} \int_{-\pi/3}^{\pi/3} (1 - 2 \cos(\theta))^2 d\theta \end{aligned}$$

## Popper 11

1. Give the area inside the inner loop of  $r = 1 + 2\cos(\theta)$ .
2. Give the number of petals for the flower  $r = 3 \sin(4\theta)$ .

3.  $\frac{1}{2}$

4. 5

# Parametric Curves

(an introduction)

Parametric curves are given by

$$(x(t), y(t)), \quad a \leq t \leq b$$

parametrizing  
variable

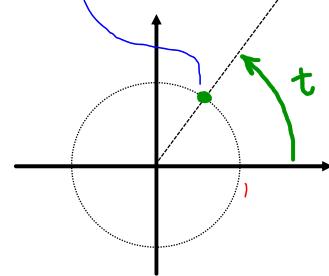

where x(t) and y(t) are given functions.

Ex.  $(t, \sin(t))$ ,  $0 \leq t \leq 2\pi$

$y = \sin(x)$ ,  $0 \leq x \leq 2\pi$

Ex.  $(\cos(t), \sin(t))$

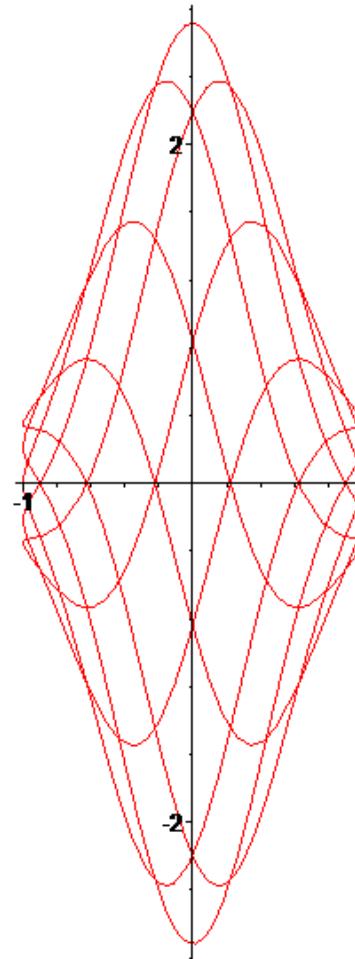

$$x^2 + y^2 = 1$$

Circle of radius 1  
Centered at  $(0,0)$ .

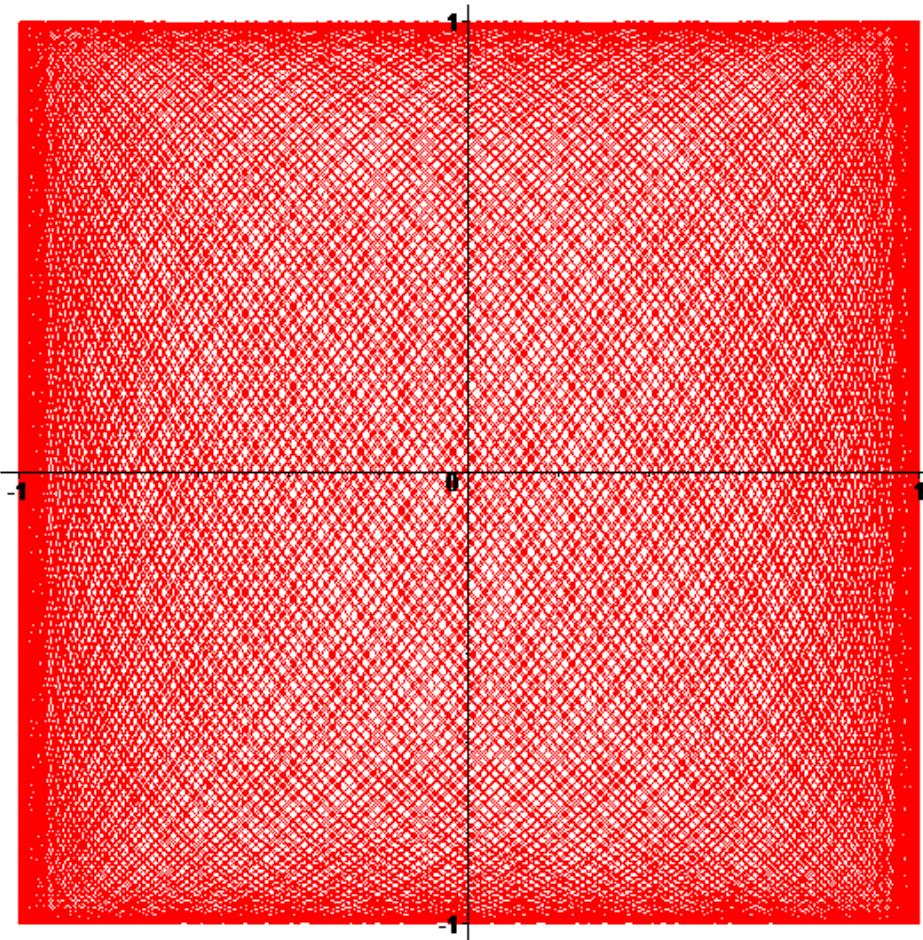

**Note: Parametric  
Curves Can Be  
Complex!!**

$$(\sin(5t), \cos(7t)e^{\cos(10t)})$$

for  $0 \leq t \leq 2\pi$

$(\sin(t), \cos(\sqrt{2}t))$   
for  $0 \leq t \leq 1000$

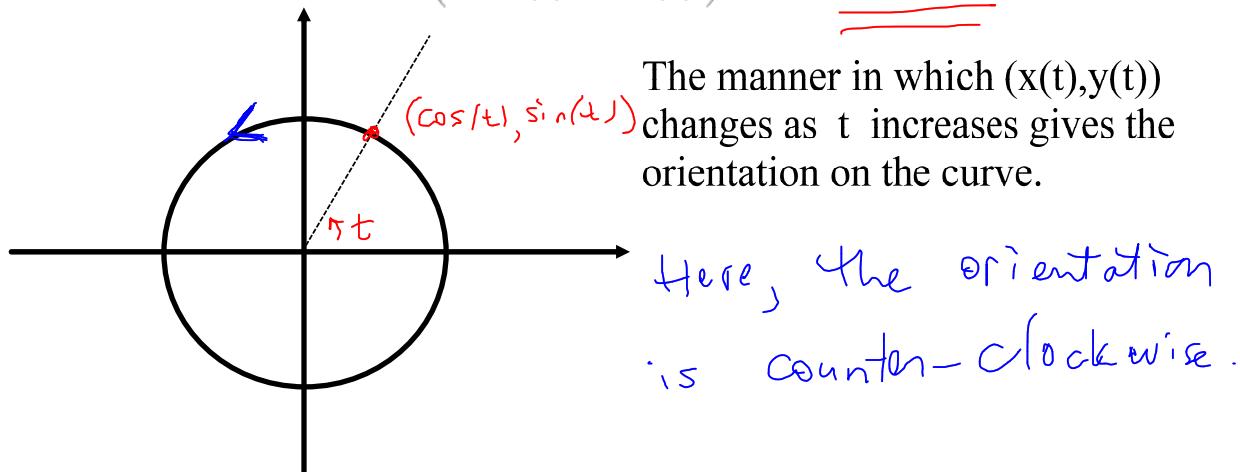

**Note:** A parametric curve has an orientation given by the parameterizing variable.

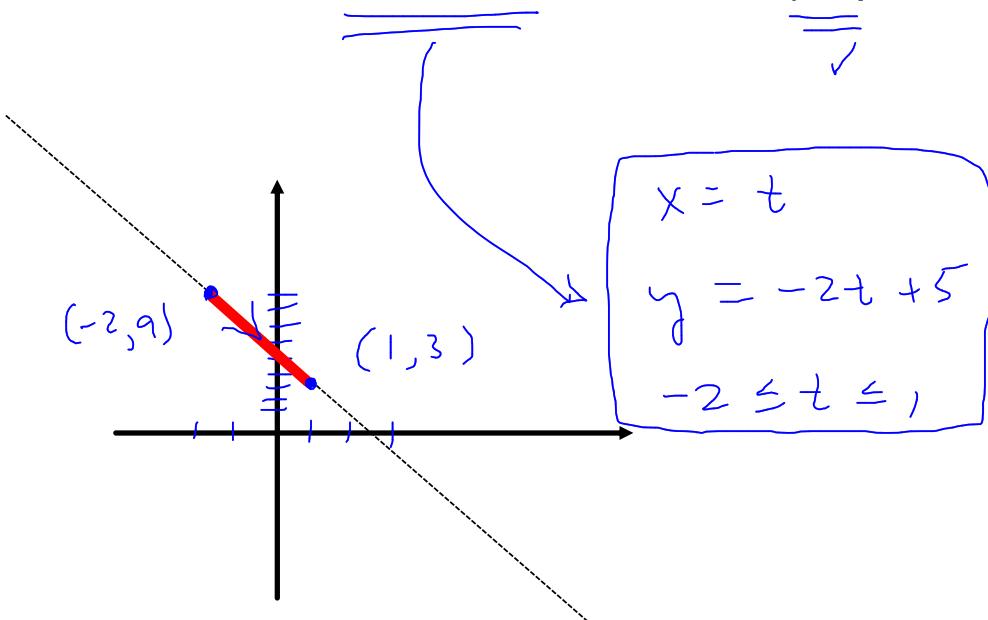

on the  
curve

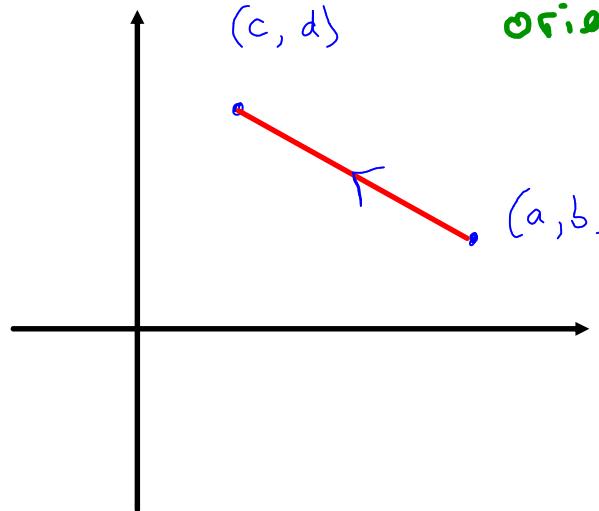

**Example:** Plot  $(\cos(t), \sin(t))$  for  $0 \leq t \leq 2\pi$ .

**Example:** Give a parameterization of the portion of the line  $y = -2x + 5$  between  $(1, 3)$  and  $(-2, 9)$ .

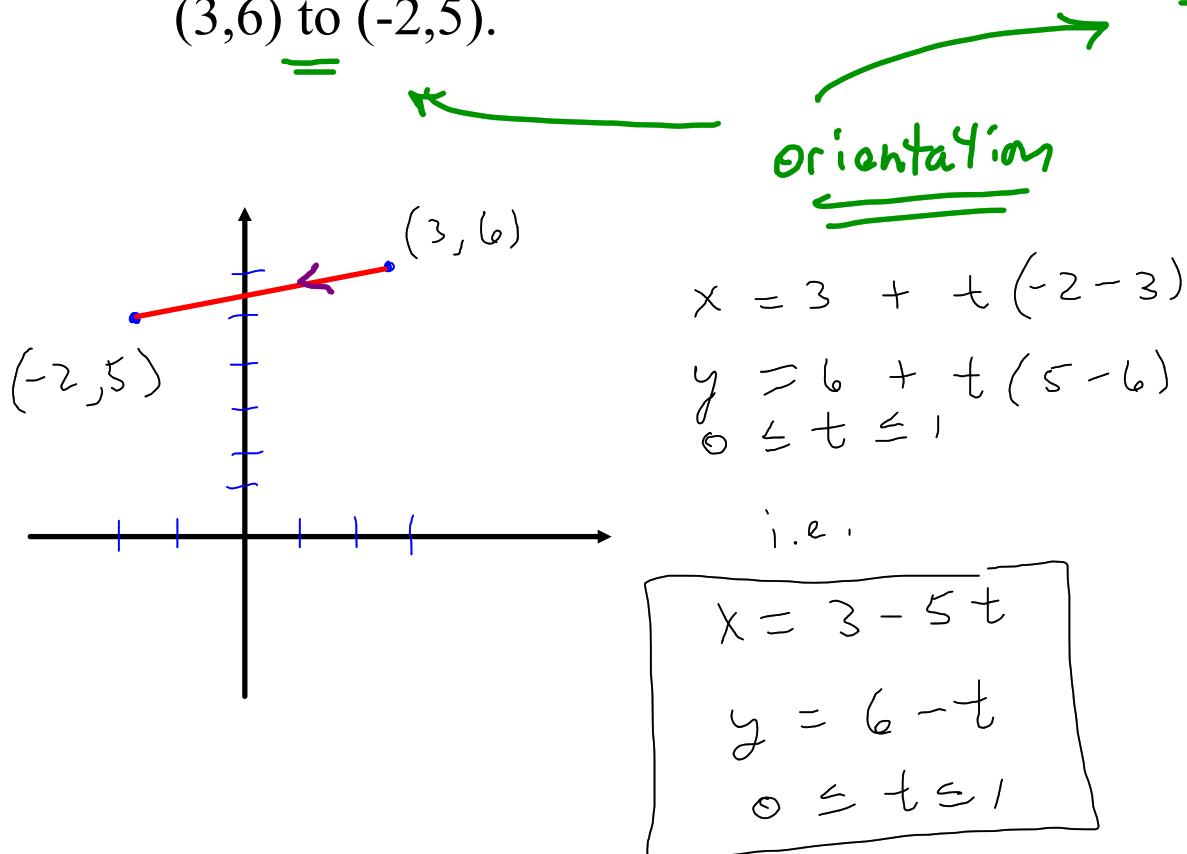

Let's describe the general mechanism  
for parameterizing a line segment  
from  $(a,b)$  to  $(c,d)$ .

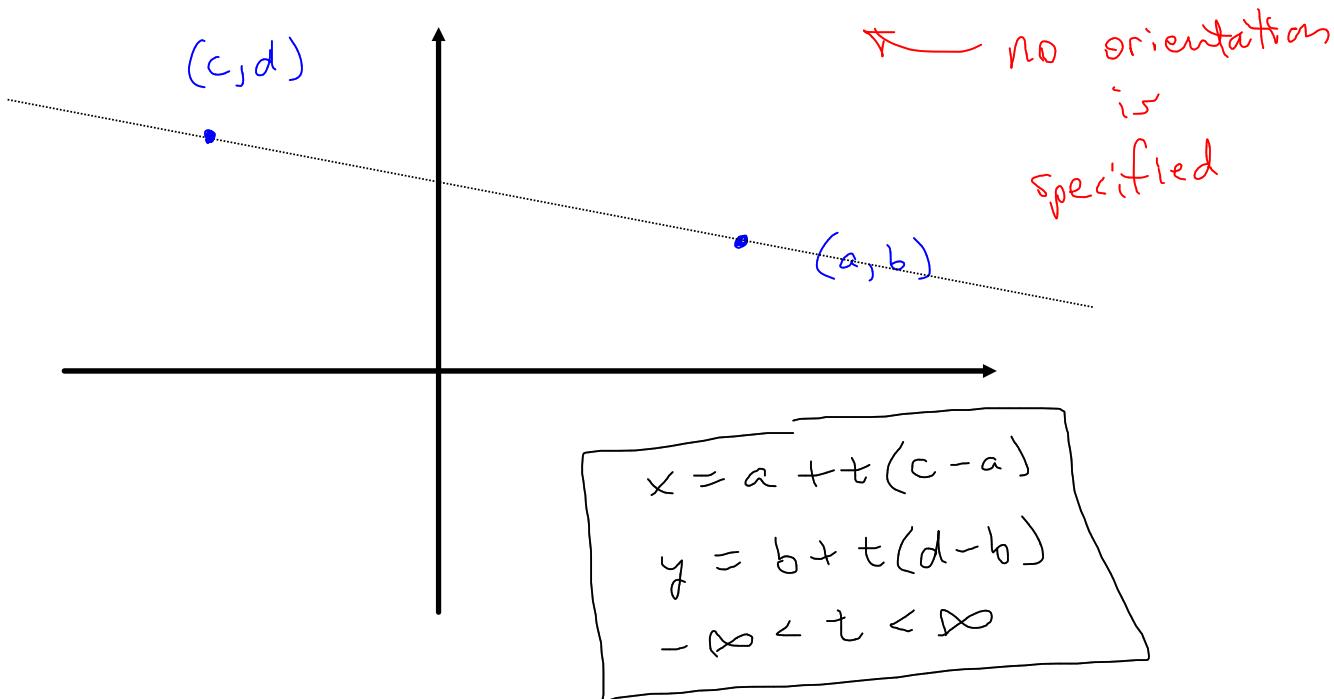

orientation

$$\boxed{\begin{aligned}x &= a + t(c-a) \\y &= b + t(d-b) \\0 \leq t \leq 1\end{aligned}}$$

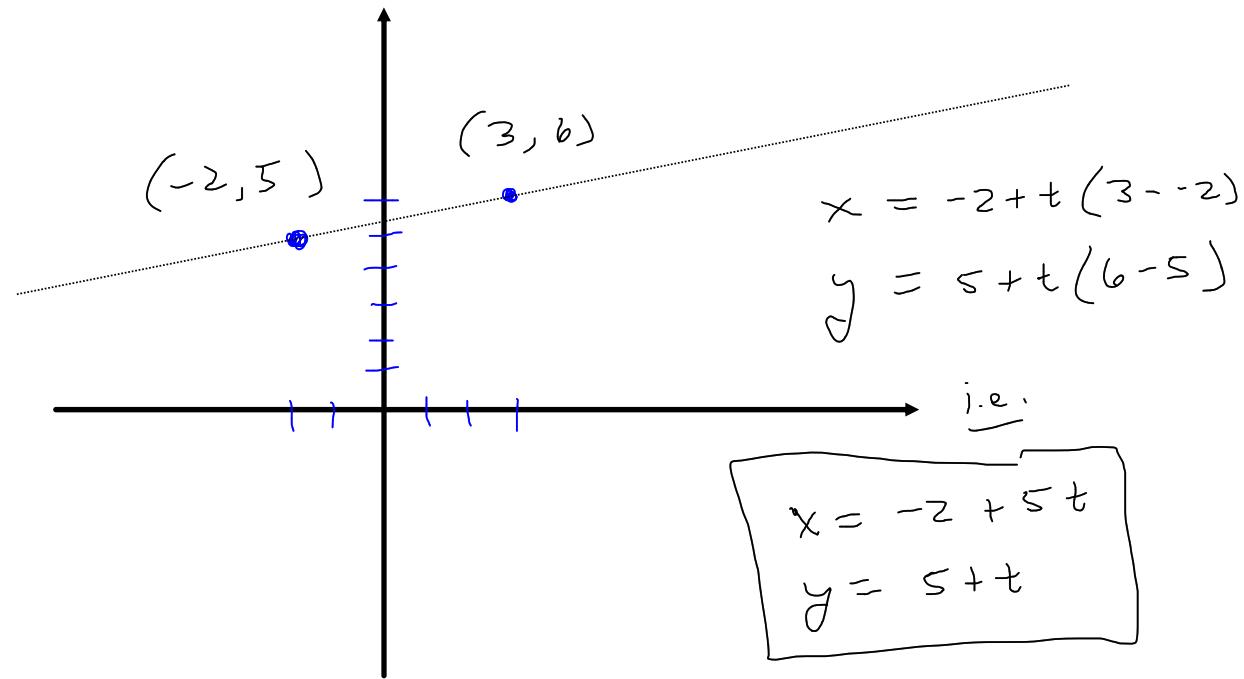

**Example:** Give a parameterization for the line segment from  $(3,6)$  to  $(-2,5)$ .

Let's describe the general mechanism  
for parameterizing a line through the  
points  $(a,b)$  and  $(c,d)$ .

**Example:** Give a parameterization for the line through the points  $(3,6)$  and  $(-2,5)$ .

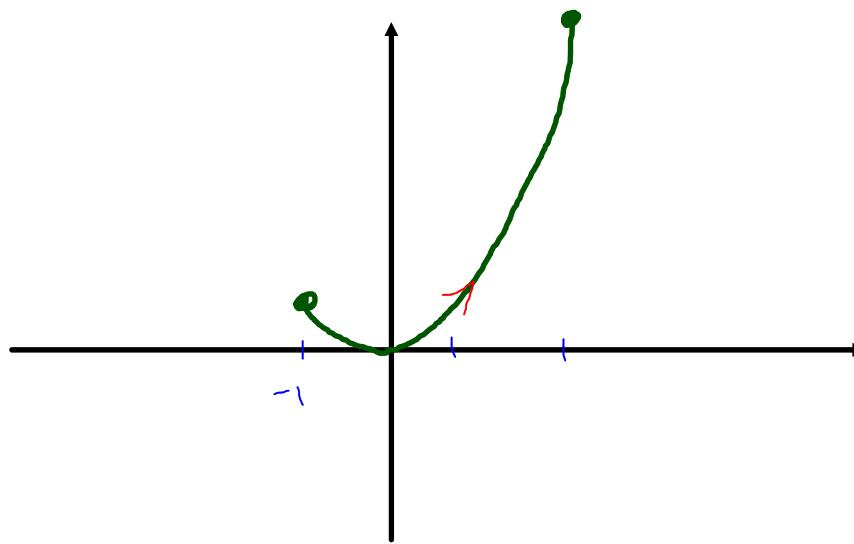

## Other parametric examples...

**Example:** Plot  $(t, t^2)$  for  $-1 \leq t \leq 2$ .

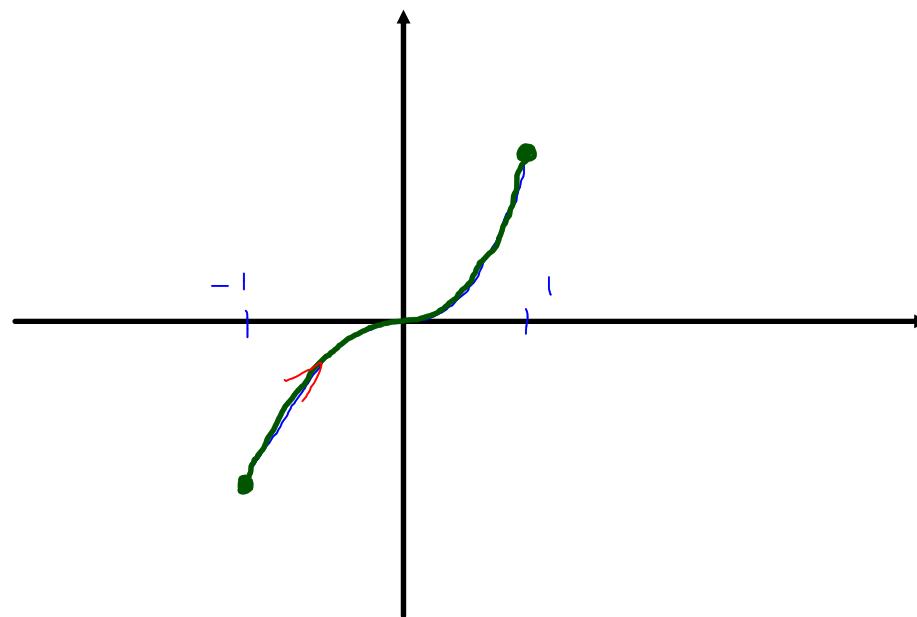

$$\begin{matrix} \uparrow \\ x \quad y \end{matrix}$$

$$y = x^2, \quad -1 \leq x \leq 2$$

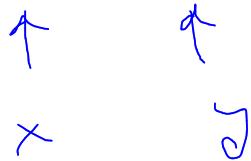

**Example:** Plot  $(t, t^3)$  for  $-1 \leq t \leq 1$ .

$x$        $y$        $y = x^3, -1 \leq x \leq 1$

**Example:** Plot  $(2 \cos(t), 3 \sin(t))$  for  $0 \leq t \leq 2\pi$ .

$$\frac{x^2}{4} + \frac{y^2}{9} = 1 \quad \underline{\text{ellipse}}$$
