

Math 1313
Test 3 Supplemental Review Solutions

1. Present Value of an Annuity

$$P = R \left[\frac{1 - (1 + i)^{-n}}{i} \right] = 350 \left[\frac{1 - \left(1 + \frac{.09}{12}\right)^{-48}}{\frac{.09}{12}} \right] = \$14064.67$$

2. Amortization

Part I:

$$R = \frac{Pi}{1 - (1 + i)^{-n}} = \frac{12000\left(\frac{.18}{12}\right)}{1 - \left(1 + \frac{.18}{12}\right)^{-72}} = \$273.69$$

Part II:

$273.69 * 72 = 19,705.93$, so you will pay \$19,705.93.

Recall the Cash Value of the tractor is: \$12,000 so $19,705.93 - 12,000 = 7,705.93$, so you will pay \$7,705.93 in interest.

3. Effective Rate

$$r_{eff} = \left(1 + \frac{r}{m}\right)^m - 1 = \left(1 + \frac{.10}{12}\right)^{12} - 1 = .1047$$
$$r_{eff} = 10.47\%$$

4. Future Value with Compound Interest

$$A = P(1 + i)^n = 5000(1 + .0225)^{68} = \$22,702.60$$

5. Present Value of an Annuity

$$P = R \left[\frac{1 - (1 + i)^{-n}}{i} \right] = 524.37 \left[\frac{1 - \left(1 + \frac{.089}{12}\right)^{-60}}{\frac{.089}{12}} \right] = 25319.83$$

$$25,319.83 + 3,000 = \$28,319.83$$

6. Sinking Fund

$$R = \frac{Si}{(1+i)^n - 1} = \frac{10000 * .015}{(1+.015)^{20} - 1} = \$432.46$$

7. Present Value with compound interest

$$P = A(1+i)^{-n} = 2000 \left(1 + \frac{.1056}{12}\right)^{-24} = \$1,620.72$$

8. Future Value of an Annuity

$$S = R \left[\frac{(1+i)^n - 1}{i} \right] = 150 \left[\frac{\left(1 + \frac{.05}{12}\right)^{36} - 1}{.05/12} \right] = \$5,813.00$$

9. Amortization

The Amount financed is

$$P = 150000 - (150000 * .20) = 150000 - 30000 = 120000$$

$$R = \frac{Pi}{1 - (1+i)^{-n}} = \frac{120000 * \left(\frac{.0625}{12}\right)}{1 - \left[1 + \left(\frac{.0625}{12}\right)\right]^{-360}} = \$738.86$$

10. Sinking Fund

$$R = \frac{Si}{(1+i)^n - 1} = \frac{20000 * .012}{(1+.012)^{20} - 1} = \$890.75$$

11. Present Value of an Annuity

$$\text{Part I: } P = R \left[\frac{1 - (1+i)^{-n}}{i} \right] = \frac{36[1 - (1+.015)^{-36}]}{.015} = \$995.78$$

$$995.78 + 50 = \$1,045.78$$

Part II: $36 * 36 = 1,296 + 50 = 1,346$, so the Club membership will cost you \$1,346 after 3 years.

12. Part I: Future Value of an Annuity

$$S = R \left[\frac{(1+i)^n - 1}{i} \right] = 750 \left[\frac{(1+.015)^{80} - 1}{.015} \right] = \$114,533.14$$

Part II: Future Value/Compound Interest

$$A = P(1+i)^n = 114533.14 * (1+.015)^{80} = \$376,889.94$$

13.

- a. {1, 5, 9, 11, 13, 15, 17, 19}
- b. \emptyset
- c. {1, 3, 5, 7, 9, 13, 17}
- d. {1, 19}
- e. {3, 5, 7, 11, 13, 15, 19}

14. A:
